

DonorsChoose

DonorsChoose.org receives hundreds of thousands of project proposals each year for classroom projects in need of funding. Right now, a large number of volunteers is needed to manually screen each submission before it's approved to be posted on the DonorsChoose.org website.

Next year, DonorsChoose.org expects to receive close to 500,000 project proposals. As a result, there are three main problems they need to solve:

- How to scale current manual processes and resources to screen 500,000 projects so that they can be posted as quickly and as efficiently as possible
- How to increase the consistency of project vetting across different volunteers to improve the experience for teachers
- How to focus volunteer time on the applications that need the most assistance

The goal of the competition is to predict whether or not a DonorsChoose.org project proposal submitted by a teacher will be approved, using the text of project descriptions as well as additional metadata about the project, teacher, and school. DonorsChoose.org can then use this information to identify projects most likely to need further review before approval.

About the DonorsChoose Data Set

The train.csv data set provided by DonorsChoose contains the following features:

Feature	Description
project_id	A unique identifier for the proposed project. Example: p036502
project_title	Title of the project. Examples: <ul style="list-style-type: none">• Art Will Make You Happy!• First Grade Fun
project_grade_category	Grade level of students for which the project is targeted. One of the following enumerated values: <ul style="list-style-type: none">• Grades PreK-2• Grades 3-5• Grades 6-8• Grades 9-12
project_subject_categories	One or more (comma-separated) subject categories for the project from the following enumerated list of values: <ul style="list-style-type: none">• Applied Learning• Care & Hunger• Health & Sports• History & Civics• Literacy & Language• Math & Science• Music & The Arts• Special Needs• Warmth Examples: <ul style="list-style-type: none">• Music & The Arts• Literacy & Language, Math & Science
school_state	State where school is located (<u>Two-letter U.S. postal code</u> (https://en.wikipedia.org/wiki/List_of_U.S._state_abbreviations#Postal_codes)). Example: WY

Feature	Description
project_subject_subcategories	One or more (comma-separated) subject subcategories for the project. Examples: <ul style="list-style-type: none">• Literacy• Literature & Writing, Social Sciences
project_resource_summary	An explanation of the resources needed for the project. Example: <ul style="list-style-type: none">• My students need hands on literacy materials to manage sensory needs!
project_essay_1	First application essay*
project_essay_2	Second application essay*
project_essay_3	Third application essay*
project_essay_4	Fourth application essay*
project_submitted_datetime	Datetime when project application was submitted. Example: 2016-04-28 12:43:56.245
teacher_id	A unique identifier for the teacher of the proposed project. Example: bdf8baa8fedef6bfeec7ae4ff1c15c56
teacher_prefix	Teacher's title. One of the following enumerated values: <ul style="list-style-type: none">• nan• Dr.• Mr.• Mrs.• Ms.• Teacher.
teacher_number_of_previously_posted_projects	Number of project applications previously submitted by the same teacher. Example: 2

* See the section **Notes on the Essay Data** for more details about these features.

Additionally, the resources.csv data set provides more data about the resources required for each project. Each line in this file represents a resource required by a project:

Feature	Description
id	A project_id value from the train.csv file. Example: p036502
description	Description of the resource. Example: Tenor Saxophone Reeds, Box of 25
quantity	Quantity of the resource required. Example: 3

Feature	Description
price	Price of the resource required. Example: 9.95

Note: Many projects require multiple resources. The `id` value corresponds to a `project_id` in `train.csv`, so you use it as a key to retrieve all resources needed for a project:

The data set contains the following label (the value you will attempt to predict):

Label	Description
project_is_approved	A binary flag indicating whether DonorsChoose approved the project. A value of 0 indicates the project was not approved, and a value of 1 indicates the project was approved.

Notes on the Essay Data

Prior to May 17, 2016, the prompts for the essays were as follows:

- `__project_essay_1:__` "Introduce us to your classroom"
- `__project_essay_2:__` "Tell us more about your students"
- `__project_essay_3:__` "Describe how your students will use the materials you're requesting"
- `__project_essay_3:__` "Close by sharing why your project will make a difference"

Starting on May 17, 2016, the number of essays was reduced from 4 to 2, and the prompts for the first 2 essays were changed to the following:

- `__project_essay_1:__` "Describe your students: What makes your students special? Specific details about their background, your neighborhood, and your school are all helpful."
- `__project_essay_2:__` "About your project: How will these materials make a difference in your students' learning and improve their school lives?"

For all projects with `project_submitted_datetime` of 2016-05-17 and later, the values of `project_essay_3` and `project_essay_4` will be NaN.

print(X_TFIDF.shape)
print(Y.shape)

(10924, 5826)
(10924,)
```

Assignment 10: Clustering

- step 1: Choose any vectorizer (data matrix) that you have worked in any of the assignments, and got the best AUC value.
- step 2: Choose any of the [feature selection](https://scikit-learn.org/stable/modules/feature_selection.html) (https://scikit-learn.org/stable/modules/feature_selection.html)/[reduction algorithms](https://scikit-learn.org/stable/modules/decomposition.html) (<https://scikit-learn.org/stable/modules/decomposition.html>), ex: selectkbest features, pretrained word vectors, model based feature selection etc and reduce the number of features to 5k features
- step 3: Apply all three kmeans, Agglomerative clustering, DBSCAN
 - **K-Means Clustering:**
 - Find the best 'k' using the elbow-knee method (plot k vs inertia_)
 - **Agglomerative Clustering:**
 - Apply [agglomerative algorithm](https://stackabuse.com/hierarchical-clustering-with-python-and-scikit-learn/) (<https://stackabuse.com/hierarchical-clustering-with-python-and-scikit-learn/>) and try a different number of clusters like 2,5 etc.
 - You can take less data points (as this is very computationally expensive one) to perform hierarchical clustering because they do take a considerable amount of time to run.
 - **DBSCAN Clustering:**
 - Find the best 'eps' using the [elbow-knee method](https://stackoverflow.com/a/48558030/4084039) (<https://stackoverflow.com/a/48558030/4084039>).
 - You can take a smaller sample size for this as well.
- step 4: Summarize each cluster by manually observing few points from each cluster.
- step 5: You need to plot the word cloud with essay text for each cluster for each of algorithms mentioned in step 3.

2.4 Dimensionality Reduction on the selected features

```
In [0]: # https://stats.stackexchange.com/questions/341332/how-to-scale-for-selectkbest-for-feature-selection
X_5K = SelectKBest(f_classif, k=5000).fit(X_TFIDF, Y)
X_5K_Feat = X_5K.transform(X_TFIDF)
print(X_5K_Feat.shape)

(10924, 5000)
```

2.5 Apply Kmeans

```
In [0]: %%time
Cl_Pa=[2,3,5,7,10,15,20,25,30]
#Cl_Pa=[2,3,5,10,25,50,100,200]
obj_loss = []
for i in Cl_Pa:
    kmeans = KMeans(n_clusters=i, random_state=0, n_jobs=-1).fit(X_5K_Feat)
    obj_loss.append(kmeans.inertia_)
```

CPU times: user 863 ms, sys: 190 ms, total: 1.05 s
Wall time: 2h 18min 15s

```
In [0]: %%time
# Performance of model on data for each hyper parameter.

****OBSERVATION:****

From the above graph we can see that sharp drop at value 20.
Hence Epsilon value is choosen as 20.
